

CHONGQING BROADCASTING COMPANY - CHINA

In July 2001 the Chongqing Broadcasting Company has constructed a new TV transmission tower.

ZINGA was applied on top of hot-dip galvanised steel. The hot-dip galvanising layer was new but due to its bad quality, it had already started to rust. It was roughened by means of a chemical etching product.

The site was inspected in April 2002 and the Zinga was found to be in excellent condition.

System :

Hot-dip	1 x 90 µm
ZINGA	1 x 40 to 50 µm
